The Game of SKUNK

My math teacher might collect homework today;
should I do it?

CHOICE vs CHANCE

S	K	U	N	K

Playing Skunk

Goal: Accumulate the greatest possible sum the 5 rounds.

- To accumulate points, a pair of dice is rolled.
- Everyone standing is an active player. Sit to become inactive.
- An *active* player gets the sum of the dice and records it on their score sheet, **unless a “one” comes up.**
- If a “one” comes up, then....
 1. The round is over
 2. ALL points in the column are wiped out.
- If "**double ones**", then...
 1. The round is over
 2. ALL points accumulates in *prior* columns gets wiped out too.

What Questions
Might We Ask
Our Students?

The Pedagogy

- Should we find out who the winner is?

winning vs. self-improvement

- Should this game be played more than once?

playing for fun vs. playing after figuring out the math

- What should the teacher do while students are playing the game? *Think-pair-share!*

SKUNK- The Big Picture

- Which part of this game is **CHOICE**?
Which games involve mostly choice?
- Which part of this game is **CHANCE**?
Which games involve mostly chance?
- Create a strategy for the game.
Write it down first. Then, share it with a neighbor.

SKUNK- The Math

- Write down all the possible outcomes.
- On average, how many good rolls happen before a 1 or 1-1 occurs?
 - How would this change how you play the game?
- When a “one” does *not* come up, what is the average score on a single roll of a pair of dice?

	1	2	3	4	5	6
1	XX	X	X	X	X	X
2	X	4	5	6	7	8
3	X	5	6	7	8	9
4	X	6	7	8	9	10
5	X	7	8	9	10	11
6	X	8	9	10	11	12

SKUNK Questions

What other questions could you ask to get your students thinking?

Think-pair-share

S | K | U | N | K

4 1 **Roll the Dice**

Oh, no -- a one! You lose all points in this column if you're standing!

The Rules of Skunk

NCTM **ILLUMINATIONS**
Resources for Teaching Math

Game of Nine Cards

- **Materials:** Nine cards numbered 1–9
- **Object:** To get a combination of **exactly** three cards in your hand that add up to 15

Game of Nine Cards

- Sample Game:

Player 1

Player 2

Player 1 Wins: $2 + 9 + 4 = 15$

Game of Nine Cards

Now what?

You Play!

Mister Mc Math
Mrs. Bennefield
Piedmont, Alabama

Questions to Consider ...

- Who is more likely to win — the first player or the second player? Why?
 - Will someone always win? Lose?
 - What can you do to ensure that you don't lose? (Or is that not possible?)
-
- Is there a “best” card to choose?
 - Why do we use a sum of 15?

A Winning Strategy?

- You play first, **pick 8**.
- Your opponent then **chooses 3**.
- What are the **three numbers** that you can choose to ensure a win?

Yours

His or Hers

A Winning Strategy?

- Your opponent plays first, **picks 6.**
- You **choose 5.**
- Your opponent **picks 4.**
- Which **two numbers** should you *not* pick?

Yours

His or Hers

NATIONAL COUNCIL OF
TEACHERS OF MATHEMATICS

A Winning Strategy?

- Your opponent plays first, **picks 7**.
- Then you **choose 2**.
- Your opponent **picks 9**.
- Which **three numbers** should you *not* pick?

Yours

His or Hers

More Sophisticated Yet?

- If your opponent plays first and picks an **even** number, what number should you choose to **avoid a loss**?

A Hint from Under the Sea

Modifying the Game of Nine Cards

- Label the nine cards as follows:

5, 12, 19, 26, 33, 40, 47, 54, 61

The winner must get three cards that total 99.

Modifying the Game of Nine Cards

- Label your nine cards with fractions:

$$1/6, 5/24, 1/4, 7/24, 1/3, 3/8, \\ 5/12, 11/12, 1/2$$

The winner must get three cards that total 1.

Modifying the Game of Nine Cards

- Use words! Label the cards as follows:

***TIED, HOT, HEAR, TANK, WASP,
WOES, SHIP, HORN, BRIM***

The winner must get three cards that bear the same letter.

Modifying the Game of Nine Cards

- Use exponents!
- Label the nine cards as follows:

$$x, x^2, x^3, \dots, x^9$$

The winner must the *product* get x^{15} .

From NINE Cards to SIXTEEN

The winner would use the sum of *four* cards to win.

You tell me!

What sum should the winner need to win?

Another Extension

- The winner is the first player to obtain the sum of exactly 15 from any **TWO OR MORE** cards.
- Does your strategy change? How so?
- Double the deck & double the sum.
- How does THAT change the game?

Reminder: What is the Goal?

- How does your strategy from the first version of the game of 9 cards compare to the strategy for these modifications?
- REFLECT: **How** did I come up with these other versions for the game of 9 cards?

Choose Door 3. What does Monty do? What do you do? Do you win or lose?

Strategy 1: Stick

Theoretical Model

Strategy 2: Flip a Coin

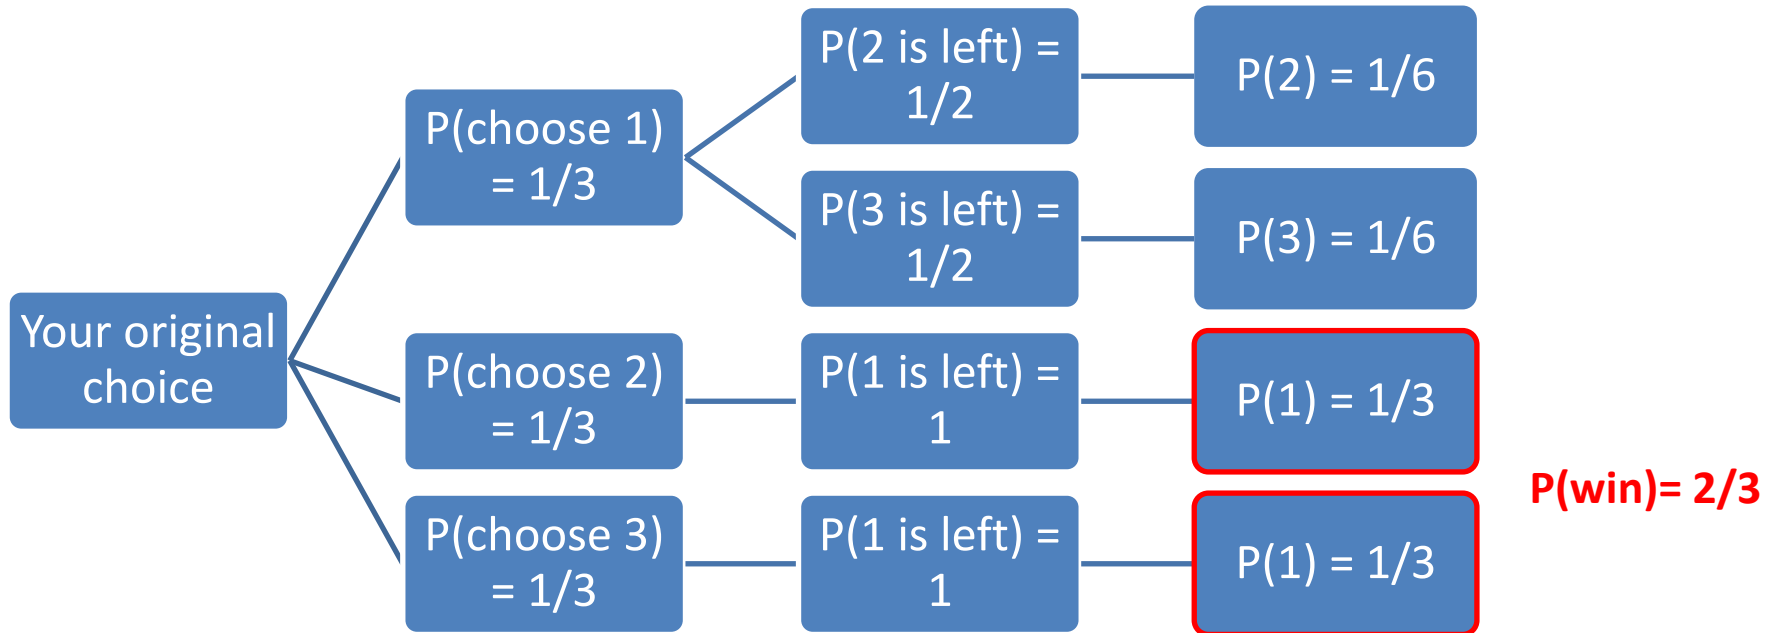

Theoretical Model

P(win) = 7/12

Strategy 3: Flip

Theoretical Model

Simple and Oh So Fun

- Write a positive integer on a piece of paper.
- Show it to your neighbor.
- The winner is...

Whoever wrote the smallest integer NOT written by anyone else.
