

This sine has
three errors.

Warm-Up

1. Multiply your age by 12.
2. Add your friend's age.
3. Divide by 7.
4. Divide by 11.
5. Divide by 13.
6. Add the first six digits after the decimal point.
e.g., $0.123456 \rightarrow 1 + 2 + 3 + 4 + 5 + 6 = 21$
7. Finally, multiply by 5...

What'd You Get?

135

Session **135**

Whoa!

How does that work?

Calculation Nation[®]: Game On!

Dollar Nim

- Start with a dollar
- Remove any coin:
 - Penny
 - Nickel
 - Dime
 - Quarter
- Player to take the last coin wins

Dollar Nim

- What is the winning strategy for this game?
- How could you modify this game for use with your students?

Eleven Nim

- Start with a dollar
- Remove any coin:
 - Penny
 - Dime
- Player to take the last coin wins

John Mason, Math 2.0 Listserve

“Just because I play a game, it does not follow that I become aware of what I am doing [or the] underlying mathematical thinking. ...the value of playing a ‘mathematical game’ may lie not in the playing so much as in the reflective consideration of effective and ineffective actions.”

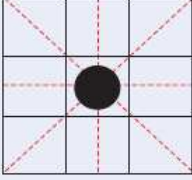

Three C's of Game Play

- Competition
- Collaboration
- Communication

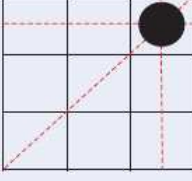

Even one-player games can spark rich discussion of strategy.

Tic Tac Toe

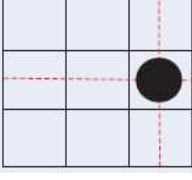

(a) The most advantageous place

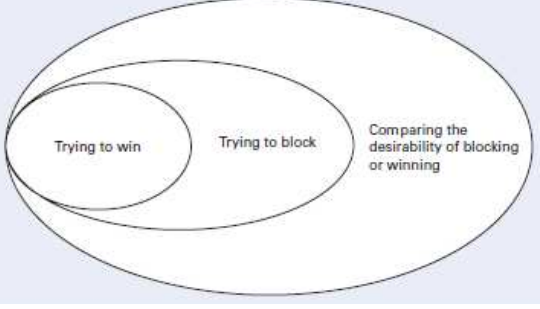

(b) The next most advantageous place

(c) The least advantageous place

The hierarchical development of the three levels

Kamii, C. The Educational Value of Tic-Tac-Toe for Four-to Six-Year-Olds. *Teaching Children Mathematics*, May 2008.

Paper Pool

How to Play Paper Pool

- The ball starts in corner A.
- The ball is **hit** with an imaginary stick so that it travels at a 45° diagonal across the grid.
- If the ball **hits** a side of the table, it bounces off at a 45° angle and continues its travel.
- The ball continues to travel until it **hits** a pocket.

Paper Pool

The diagram shows a 5x3 grid representing a pool table. The corners are labeled A (bottom-left), B (bottom-right), C (top-right), and D (top-left). A blue path starts at corner A, moves diagonally to the top-right, hits the top edge at the second vertical line from the left, then reflects and moves diagonally to the bottom-right, hitting the bottom edge at the third vertical line from the left, then reflects and moves diagonally to the top-right, hitting the top edge at the fourth vertical line from the left, and finally reflects and moves diagonally to the bottom-right, ending at corner B.

 NATIONAL COUNCIL OF
TEACHERS OF MATHEMATICS

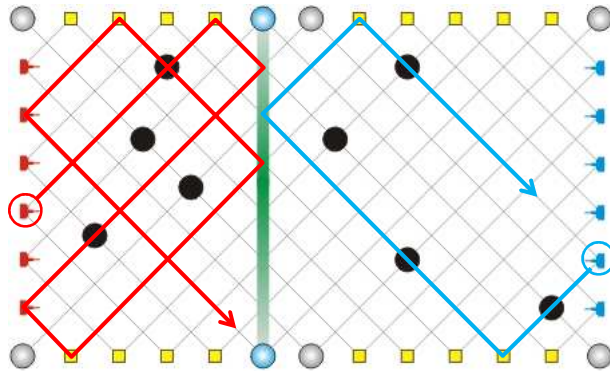

From Paper Pool...

- Online Version of the Paper Pool Lesson
<http://illuminations.nctm.org/LessonDetail.aspx?ID=U165>

The screenshot shows an online pool simulation interface. It features a 5x3 grid with a green background. A white ball starts at corner A and moves diagonally to the top-right, hitting the top edge at the second vertical line from the left. The path is marked with white dots and arrows. The word "Hit" is written in red above the ball's position. The interface includes a "Speed" slider, a list of checkboxes for "Show Trac", "Show Grid", "Pool Table", "Count Hits", and "Sound", and a status bar at the bottom showing "Pool Table Dimensions: 5 x 3" and "Hits: 3".

Ker-Splash

- Choose an expression:

$$17x + 29y + 43$$

$$24x + 22y + 39$$

- The values of x and y are unknown... but you can choose to increase one of them by 1, and decrease the other by 1. Which would you like to increase and which to decrease?
- Now, here are the values: $x = 6$, $y = 4$

Ker-Splash

Your Equation	$x + 1, y - 1$	$x - 1, y + 1$
$17x + 29y + 43$	249	273
$24x + 22y + 39$	273	269

NCTM NATIONAL COUNCIL OF TEACHERS OF MATHEMATICS

Tips for Teaching with Games

- Do not show children how to play at a higher level. Instead, encourage them to do their own thinking.
- Do not reinforce “correct” behaviors or try to correct “wrong” ones.
- Play with individual children whenever possible.

Prime Time

Which is most likely to give an outcome of 4?

- Roll one die
- Roll two die, sum
- Roll two die, difference
- Spinner with four consecutive integers (your choice)
- Flipping n coins, number of heads

Prime Time

Roll one die

$$P(4) = 1/6$$

Prime Time

Roll two die, add

	1	2	3	4	5	6
1	2	3	4	5	6	7
2	3	4	5	6	7	8
3	4	5	6	7	8	9
4	5	6	7	8	9	10
5	6	7	8	9	10	11
6	7	8	9	10	11	12

Prime Time

Roll two die, subtract

	1	2	3	4	5	6
1	0	1	2	3	4	5
2	1	0	1	2	3	4
3	2	1	0	1	2	3
4	3	2	1	0	1	2
5	4	3	2	1	0	1
6	5	4	3	2	1	0

Prime Time

Spinner with four consecutive integers (your choice)

Prime Time

Flipping n coins, number of heads

n	P(exactly 4 heads)
1	0
2	0
3	0
4	$1/16$
5	$5/32$
6	$15/64$

n	P(exactly 4 heads)
7	$35/128$
8	$70/256$
9	$126/512$
10	$210/1024$
11	$330/2048$
12	$495/4096$

Prime Time

Select a Grade:

Thinkfinity

- Provides standards-based content and professional development for K–12 teachers
- Supported by the **Verizon Foundation**
 - NCTM received a three-year, \$1.4M grant for Illuminations
- Consortium of content partners across all disciplines
 - science, arts, humanities, geography, economics, language arts, math, and history

Game of Nine Cards

- **Materials:** Nine cards numbered 1–9
- **Object:** To have any three cards in your hand that add up to 15

Game of Nine Cards

- Sample Game:

Player 1

Player 2

Player 1 Wins: $2 + 9 + 4 = 15$

Game of Nine Cards

Now what?

You Play!

The Basics...

- Who is more likely to win — the first player or the second player? Why?
- Will someone always win? Lose?
- What can you do to ensure that you don't lose?
- Is there a “best” card to choose?
- Why do we use a sum of 15?

A Winning Strategy?

- You play first, **pick 8**.
- Your opponent then **chooses 3**.
- What are the **three numbers** that you can choose to ensure a win?

Yours

His or Hers

A Winning Strategy?

- Your opponent plays first, **picks 6.**
- You **choose 5.**
- Your opponent **picks 4.**
- Which **two numbers** should you **not** pick?

Yours

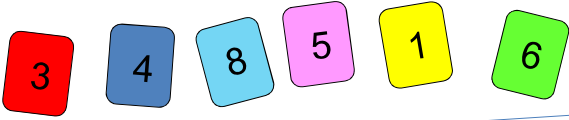

His or Hers

NATIONAL COUNCIL OF
TEACHERS OF MATHEMATICS

A Winning Strategy?

- Your opponent plays first, **picks 7.**
- Then you **choose 2.**
- Your opponent **picks 9.**
- Which **three numbers** should you **not** pick?

Yours

His or Hers

NATIONAL COUNCIL OF
TEACHERS OF MATHEMATICS

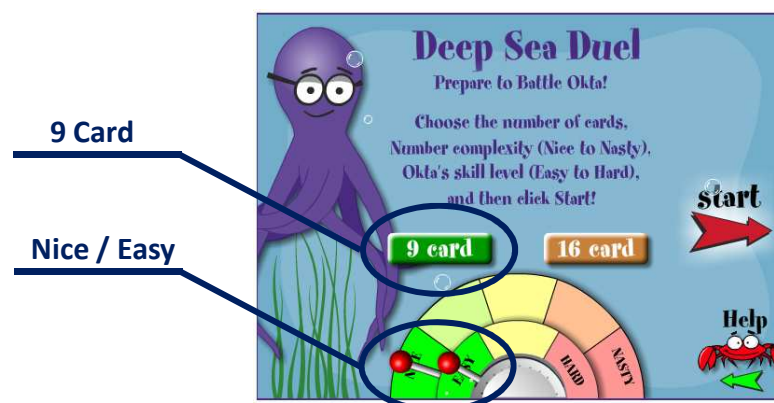

More Sophisticated Yet?

- If your opponent plays first and picks an **even** number, what number should you choose to **avoid a loss**?

Another App from Under the Sea

Deep Sea Duel

Game of Nine Cards

- **Deep Sea Duel** is online!
– <http://illuminations.nctm.org/deepseaduel>

A Hint from Under the Sea

Game of Nine Cards

- Why is this game mathematically significant?
Consider the following chart:

8	1	6
3	5	7
4	9	2

Modifying the Game of Nine Cards

- Label the nine cards as follows:
5, 12, 19, 26, 33, 40, 47, 54, 61

The winner must get three cards that total 99.

Modifying the Game of Nine Cards

- Label the nine cards with fractions:

$\frac{1}{6}$, $\frac{5}{24}$, $\frac{1}{4}$, $\frac{7}{24}$, $\frac{1}{3}$, $\frac{3}{8}$,
 $\frac{5}{12}$, $\frac{11}{12}$, $\frac{1}{2}$

The winner must get three cards that total 1.

Game of Nine Cards

- Use exponents! Label the cards as follows:

x , x^2 , x^3 , ..., x^9

This time we want the *product* of three cards (which means we must *add* the exponents).

The winner must get x^{15} .

- Have your students come up with the Magic Square for each of these modifications!

Modification: Words

- Use words!

**TIED, HOT, HEAR,
TANK, WASP, WOES,
SHIP, HORN, BRIM**

- Winner needs three cards with same letter.

Modification: Sixteen Cards

The winner needs a sum of *four* cards to win.

Modification: Sixteen Cards

- What sum would the winner need?

Modification: Two or More

- The winner is the first player to obtain the sum of exactly 15 from any **TWO OR MORE** cards.
- How does your strategy change?

Can You Use This Game?

- How could you modify the game of nine cards to fit the needs of your students?

Reminder: What is the Goal?

- How does your strategy from the first version of the game compare to the strategy for these modifications?
- *Reflect:* How did you come up with these other versions for the game of nine cards?

Game of Nine Cards

nctm.org/gameofnine

iStuff. Android. Computer.

illuminations.nctm.org/deepseaduel

Equations of Attack

- Original Game:
 - Both players place ships of length 2, 3, 4, and 5 on game board
 - Other player guesses location of your ships
 - Then, draw a line connecting each of your ships to each of your opponent's ships of the same length
 - Determine the equation of the lines connecting the ships

Equations of Attack

Equations of Attack

- Revised Game:
 - Players take turns placing ships at lattice points
 - One player gets all of the cannons at the even locations along the y -axis — that is, $(0,0)$, $(0,2)$, $(0,4)$, $(0,6)$, and $(0,8)$
 - Other player gets all cannons at the odd locations along the y -axis — that is, $(0,1)$, $(0,3)$, $(0,5)$, $(0,7)$, and $(0,9)$
 - Player rolls dice; roll both, use them to make a fraction representing the slope

Equation of Attack

Equations of Attack

- The Algebra Standard states that “in grades 6–8 all students should explore relationships between symbolic expressions and graphs of lines, paying particular attention to the meaning of intercept and slope” (NCTM, 2000, p. 222).
- How does the activity help with understanding of those concepts?

My Favorite Game...

- Write a positive integer on a piece of paper.
- Show it to your neighbor.
- The winner is...

Whoever wrote the smallest integer NOT written by anyone else.

My Favorite Game

- Min: 1
- Max: 18
- Mode: 1
- Average: 8.5

My Favorite Game

- Min: 1
- Max: 17
- Mode: 7
- Average: 7.5

My Favorite Game

- Min: 1
- Max: 14
- Mode: 3
- Average: 5.3

My Favorite Game

- Min: 1
- Max: 14
- Mode: 7
- Average: 7.7

My Favorite Game

- Min: 1
- Max: 11
- Mode(s): 2, 7
- Average: 6.4
