Grouping Beans

A game to understand division by sharing (partitive division).

Cut out the number cards and shuffle your cards.
Put the cards facedown on your table.

Player A takes a card and takes the number of beans shown on the card. Then Player A roles the die. The number on the die is the number of groups you need to make using your beans. Player A's score is the number of beans in each group. If there is no remainder, Player A's score is double the number of beans in one group.

Next Player B takes a card, beans and rolls the die following the same rules from Player A.

Keeping track of scores, the winner is the highest scorer after five rounds!
