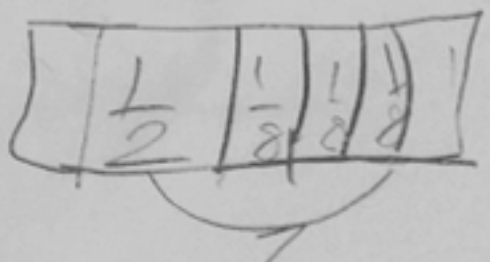
AJ's Work

Adding Fractions (page 2 of 3)

Solve each problem and show your solution.

3. $\frac{1}{2} + \frac{3}{8} =$ 7/8



4. $\frac{1}{3} + \frac{1}{2} + \frac{2}{3} =$ 1 1/2

$\frac{2}{3} + \frac{1}{3} = 1$

5. $\frac{1}{2} + \frac{3}{6} + \frac{4}{8} =$ 1 3/8

$\frac{4}{8} + \frac{1}{2} = 1$

6. $\frac{5}{6} + \frac{1}{3} =$ 1

$\frac{5}{6} + \frac{1}{3} = 1$

7. $\frac{3}{12} + \frac{1}{2} + \frac{1}{4} =$ 5/12

$\frac{1}{4} + \frac{1}{2} = \frac{1}{6}$

$\frac{3}{12} + \frac{1}{6} = \frac{5}{12}$

8. $\frac{1}{4} + \frac{3}{8} + \frac{1}{4} =$ 1

$\frac{1}{4} + \frac{1}{4} = \frac{2}{4}$

$\frac{3}{8} + \frac{2}{4} = 1$

Name Date

Fraction Cards and Decimal Squares

Adding Fractions (page 2 of 3)

Solve each problem and show your solution.

3. $\frac{1}{2} + \frac{3}{8} =$ $\frac{1}{2}$

How many eighths is this, altogether? 1

4. $\frac{1}{3} + \frac{1}{2} + \frac{2}{3} =$ $1\frac{1}{2}$

5. $\frac{1}{2} + \frac{3}{6} + \frac{4}{8} =$ $1\frac{1}{2}$

6. $\frac{5}{6} + \frac{1}{3} =$ 1

A correct answer to this is $1\frac{1}{2}$.
Can you draw pictures that prove this?

7. $\frac{3}{12} + \frac{1}{2} + \frac{1}{4} =$ $\frac{5}{12}$

8. $\frac{1}{4} + \frac{3}{8} + \frac{1}{4} =$ $\frac{5}{8}$
